

Spruce Emmanuel

Developer who writes. Nearly a decade of building things on the web.

Experience

Freelance Web Developer and Technical Writer **Dec 2024–Present**

Currently working on web projects and writing technical content for clients. Building things, documenting them, and helping teams ship better products.

Technical Writer, Professional Data Skills **Jan–Dec 2024**

Got to work with content teams from some big tech names like CrowdStrike, Toptal, and SitePoint. Wrote data science and software engineering tutorials, guides, and documentation. Learned a lot about explaining complex technical concepts in ways that actually make sense.

Freelance Technical Writer, Hit-Subscribe **April 2023–Sep 2024**

Purely written work here. Everything from simple how-to articles to ones that needed me to build entire products just to explain how something works. Got really good at breaking down complex dev tools and frameworks into readable content.

Web Developer and Technical Writer, ContentLab **April 2022–Jan 2024**

Split my time between writing and building. When I wasn't writing, I was working with the dev team building accessible web applications for companies promoting their features. Some of these companies included Zoho, Kinsta, TomTom (Weather), Cohere, and even Meta. Focused heavily on WCAG compliance and making sure everything worked perfectly across devices.

Frontend Developer, Compass Software Technologies (Pty) Ltd **Oct 2020–2021**

Part of a small team building websites for companies. Worked on everything from design implementation to deployment. Got comfortable working in fast-paced environments and shipping code regularly.

Freelance Web Developer **2018–2020**

Built websites and web apps for clients. Handled everything—talking to clients, figuring out what they needed, building it, and getting it live. This is where I really learned how to ship things on my own.

Education

Complete Computer's Technology Institute

National Innovation Diploma, Computer Software Engineering
Nov 2021–Nov 2023

Skills

Development

JavaScript/TypeScript
React
Next.js
Vue
Svelte
AngularJS
HTML/CSS/SASS
Node.js
REST APIs
Git/GitHub
